

## **Hip preservation can prevent future complications, arthritis & early hip joint replacement surgery:Dr Prasad**

Hyderabad, Apr 14 (UNI) Renowned Pediatric and Young Adult Orthopedic surgeon from Chicago Dr Gourineni Prasad said that if hip preservation surgery was performed in young patients, it would delay or arrest arthritis and also helps in avoiding or delaying total hip joint replacement surgery in further. Talking to newsmen here on Sunday, Dr Prasad who is here to participate in 12th Continue Medical Education (CME) 2019 "Advanced Hip Preservation Course" organized Sai Institute of Sports Injury & Arthroscopy (SISA) said that not many, especially the young adults and children, are aware that pain in thigh or knee may sometimes indicate hip problems and any delay in diagnosing and treating the problem will lead to irreversible damage and arthritis of the hip joint.
